

ETHERFAX AND LEXMARK

The addition of Lexmark products to the etherFAX service ushers in a whole new era for fax and document delivery. By extending Lexmark's solutions to the etherFAX network in the cloud, customers can securely send documents to the millions of etherFAX's connected endpoints with ultra-fast transmission speeds and guaranteed delivery.

Say farewell to busy signals, analog phone lines, and SIP trunks. Making use of etherFAX's network, each device can receive thousands of documents simultaneously, so a sender never experiences a busy signal. The etherFAX network enables secure, error free transmissions with optional end-to-end encryption to any device or application on etherFAX's Secure Exchange Network (SEN).

Supported Devices: All Lexmark MFPs introduced in 2012 and later.

PRODUCT FEATURES

- No change to the user experience, therefore no retraining
- Customers can still fax to traditional, legacy endpoints on the PSTN
- Never busy in-bound fax (SEN and PSTN)
