

## WEAVE™ Extract

Data extraction analyzes your documents and maps key-value-pairs to capture and extract structured data. This data can be easily integrated into workflows and applications to save time and money.

### Why Use WEAVE™ Extract?

Eliminate the need to manually key in data elements and reallocate staff to focus on more value-added tasks. WEAVE™ Extract unlocks unstructured data in forms, turning them into usable, structured data. Create accurate data fields designed specifically to integrate with your application, without excessive manual intervention or complex machine-learning tools.

### Features & Benefits

- Integrate with apps for automated workflows, or integrate into EHRs
- Save time and reduce manual data entry errors
- Faxes become part of all searchable documents in your content management system
- Seamless integration with industry-leading fax servers and fax-enabled applications
- Create captured metadata in an enhanced payload that contains key-value-pairs
- No on-premise technology or overhead resources needed

## More Reasons to Switch

Digitizing documents received as a fax makes it easier to find content locked inside an image. WEAVE™ Extract helps eliminate the need for staff to manually open each fax, understand what type of form it is, and manually move it to a work queue. Removing manual data entry also eliminates downstream impacts and costs associated with rejected claims from a payer if data was miskeyed.

## Problems Solved

Enhance efficiency and accuracy by removing manual data entry

Reclaim time spent manually processing incoming faxes

Turn an unstructured .TIFF faxed document into a digitized and usable format

Automate tasks, such as scheduling and referrals, using document recognition

## About etherFAX

With over six million connected endpoints, etherFAX is the world's largest document exchange network, supporting every major fax server, application, and fax-enabled device. Its secure document delivery platform and suite of applications are widely used across a broad range of industries to digitize workflows and optimize business processes. As a leading provider of hybrid-cloud fax solutions supporting healthcare enterprises, etherFAX securely transmits protected health information and high-resolution, color documents directly to applications and devices with end-to-end encryption and ultra-fast transmission speeds. etherFAX's secure, cloud-based, and encrypted data exchange solutions operate in a HIPAA and SOC 2® compliant environment that is both HITRUST CSF® and PCI DSS certified.
