

WEAVE™ PDF

Data capture and extraction transform unstructured documents into structured, searchable PDFs that are ready to be integrated into workflow processes and applications. Patient information can easily be found in these searchable PDFs and then cut and pasted from the document.

Why Use WEAVE™ PDF?

Tired of manually searching for key data and typing it into another application? WEAVE™ PDF creates a data capture workflow that frees up your team's valuable time by reducing the need to manually key in unstructured data into your third-party workflow applications.

Features & Benefits

- Users can search for, and extract, data directly from the document
- Save time and reduce manual data entry errors
- Faxes become part of all searchable documents in your content management system
- Seamless integration with industry-leading fax servers and fax-enabled applications
- Easy – flip a switch and faxes are delivered as searchable
- No on-premise technology or overhead resources needed

More Reasons to Switch

Digitizing faxed documents makes it easier to find content locked inside an image. Finding the relevant content in a multi-page fax document, such as an Order Number, can be tedious. WEAVE™ PDF captures the content of the fax, allowing you to easily share and store digital documents.

Problems Solved

Easily copy-and-paste directly from a document

Turn an unstructured .TIFF faxed document into a digitized and usable format

Quickly find the right document and search content within the document

Reallocate teams to focus on tasks that drive revenue, rather than unlocking unstructured data trapped in form images

About etherFAX

With over six million connected endpoints, etherFAX is the world's largest document exchange network, supporting every major fax server, application, and fax-enabled device. Its secure document delivery platform and suite of applications are widely used across a broad range of industries to digitize workflows and optimize business processes. As a leading provider of hybrid-cloud fax solutions supporting healthcare enterprises, etherFAX securely transmits protected health information and high-resolution, color documents directly to applications and devices with end-to-end encryption and ultra-fast transmission speeds. etherFAX's secure, cloud-based, and encrypted data exchange solutions operate in a HIPAA and SOC 2® compliant environment that is both HITRUST CSF® and PCI DSS certified.
