# ETHERFAX®

Why Use etherFAX?

The days of two modems hissing at each other to send grainy, pixelated black and white 200 DPI images are long gone. etherFAX has changed what it means to send a fax. We don't even touch a phone line! We have direct integrations with solutions such as Hyland OnBase and Epic, and can connect directly to any fax server or MFP. Our integrations also extend into collaboration tools such as Microsoft Teams and Slack, where there's no longer a need to use traditional fax servers and desktop faxing tools.

Security

etherFAX services operate in a HIPAA and SOC 2® compliant environment that is both HITRUST CSF® and PCI DSS certified. We have implemented multiple defense-in-depth strategies into our patented etherFAX technology including two-factor authentication and end-to-end encryption to guarantee that patient data and business-critical information remain protected.

Solutions

Secure Document Exchange

Collaborate via Teams or Slack with DirectFax– deliver documents directly into your channels, with no change to your current document exchange workflows.

Exchange faxed documents directly from an inbox with Email Faxing.

Securely exchange patient information with Direct Secure Messaging.

Integrate fax capabilities into any application, through our API library, or via our Software Development Kit.

Data Extraction

Transform unstructured documents, such as PDFs, faxes, and paper-based forms, into structured, searchable data.

Analyze your documents and forms, mapping key-value-pairs.

Capture and extract structured data, ready to be integrated into your workflow processes and applications.

Workflow Automation

Drop documents directly into a file folder that can be swept by content management systems, or ingested and integrated into third-party applications, such as EHRs.

Allow third-party applications to automate workflow tasks with data extraction and document classification.

Integration and Interoperability

Transform a referral note into a C-CDA, imported directly into the clinical workflow.

Send a Direct Secure Message to coordinate care between clinical care teams.

Automate workflow between referral teams and patient registration teams, integrating exchanged documents directly into workflows.
